

# ARK CONTAINER SUPPLIES MANAGEMENT

**Supplies Management**

Our on-site ARK Containers are an economical way to keep substantial quantities of Emergency Preparedness Supplies away from the building in one central location for your corporate campus in times of disaster.

Our Disaster Professionals will prepare a GAP analysis of your existing supplies to ensure you are properly outfitted for emergencies. We take responsibility to maintain and replenish according to your needs and demands based on population and risk profile.

We offer customizable layout options for your on-site ARK Storage Container meeting the needs of your company

based on our complimentary site assessment. We retrofit containers to include solar package, inverter, battery package, wiring communications and fully functioning ICS.

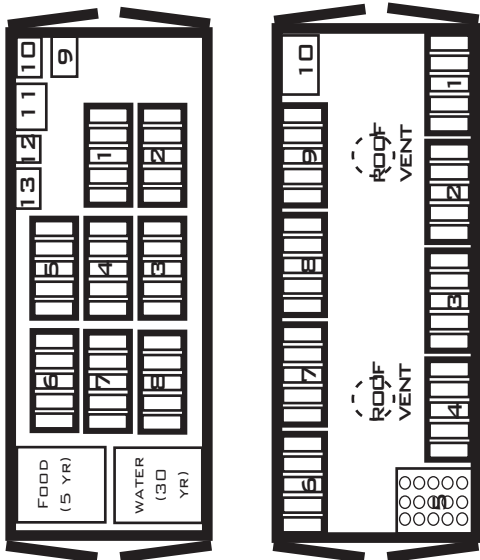

These containers are one of the strongest modular structures made. They are water-tight and extremely secure giving your response team peace of mind when storing their supplies. These ARK Containers come in a variety of sizes from 10ft to 40ft .

All Storage containers meet ISO (International Standards Organization) requirements and are easily transportable by rail car to another state or by shipping vessel overseas.
